An **Internal Review Board (IRB)**, also known as an **Institutional Review Board**, is a committee within an institution responsible for reviewing research projects involving human subjects. Its primary purpose is to ensure the protection of the safety, rights, and welfare of these participants. When an IRB reviews a research proposal, it has the authority to approve, request modifications, or disapprove the study if it believes the participants' rights or welfare are not adequately safeguarded[1] [2]. Essentially, IRBs play a critical role in maintaining ethical standards in research involving human subjects. □□
